

Large Scale Solar Europe

Solar: The Power Behind Europe's Energy Transition

 **Lisbon Marriott Hotel, Portugal**  **25-26 March 2025**

The Large Scale Solar Europe has established itself as the leading platform for solar energy leaders across the continent. Returning to Lisbon on 25-26 March 2025, this unique pan-European event will convene over 500 decision-makers, thought leaders, and stakeholders at the forefront of solar development and deployment.

Why This Summit Matters Now

Europe added a record-breaking **66 GW of solar in 2024**, but growth has slowed sharply to **4% annually**, following years of over 40% increases. Challenges like grid congestion and a cooling residential rooftop market are holding back utility-scale projects, highlighting the urgent need for solutions.

At the same time, key policy initiatives like the **Clean Industrial Deal** and **Electrification Action Plan** in 2025 aim to drive flexibility and integration, with the potential to cut **2030 energy prices by 25%** and boost solar capture rates by **71%**. As three countries now host more than **1 kW of solar per capita**, Europe is at a critical juncture to secure its position as a global leader in renewable energy.

The **Large Scale Solar EU 2025 Summit** offers the platform to address these challenges, ensuring the solar sector remains on track to become Europe's **number one energy source by 2030**.

A Must-Attend Event for Solar Leaders

The summit will unite developers, utilities, independent power producers (IPPs), investors, policy-makers, and technology providers under one roof to explore key topics such as:

- **Tackling grid congestion and boosting infrastructure investment**
- **Driving the adoption of hybrid projects integrating solar, storage, and hydrogen**
- **Unlocking new financing pathways amidst rising interest rates**
- **Streamlining permitting and planning across European markets**
- **Accelerating the development of a European solar manufacturing ecosystem**

Unmatched Networking and Business Opportunities

Attendees will have the opportunity to connect with over **200 developers actively building gigawatt-scale projects** and 75% of the audience at Director-level or above. Through structured networking sessions, interactive panels, and exclusive workshops, participants will forge meaningful connections that catalyse real-world projects.

How to Participate

Registration is now open for Large Scale Solar Europe, secure your spot today to join Europe's top solar developers, investors, and innovators in shaping the future of solar energy. Visit [Home - Large Scale Solar Europe 2025](#) for more information or [schedule a call](#) today to discuss how you can get involved as a speaker or sponsor.
