Featuring:

Post Show Report

Dear attendees,

Thank you for joining us at the Clean Power 2030 Summits. These three events, focused on solar, wind and green hydrogen, brought together key stakeholders to drive investment and collaboration in advancing the UK's clean energy transition. The UK has surpassed 21GW of operational solar capacity, with 2025 off to a strong start. Wind energy continues to thrive, with over 30GW of operational capacity evenly split between offshore and onshore projects. Finally, green hydrogen's growth path was outlined, with 9 MW in operation and over 3.8 GW in the pipeline after a successful allocation round "HAR2", we discussed the role of green hydrogen in hitting the clean power milestones.

Attendees heard from UK Government, DESNZ, Ofgem, NESO, DSOs, the Low Carbon Contracts Company, GB Energy, the National Wealth Fund, and global infrastructure investors, debt providers, developers and utilities.

Highlights included a keynote speech by Michael Shanks MP, Parliamentary Under-Secretary of State for Energy, who underscored the economic benefits of transitioning to clean energy, reducing reliance on volatile fossil fuel markets investment in green supply chains, skills, and jobs.

The Summits aligned with the launch of the UK Solar Roadmap, a landmark strategy that outlines the path to achieving 47GW of solar capacity by 2030. Additionally, Quinbrook Infrastructure Partners announced the full operational status of the 373MW Cleve Hill Solar Park in Kent at the summit. Cleve Hill is the largest solar plant in the UK, a milestone that highlights the nation's progress in renewable energy deployment and a scale up on project sizes.

Ofgem's Neil Kenward, Director for Strategy, Economics, Research and Net Zero, shared details of the £24 billion investment programme to upgrade the UK's electricity network. With up to £80 billion in capital investment anticipated during the RIIO-3 period which ends in 2031.

Finally, the UK Industrial Strategy was a focal point of the summit, emphasising clean energy industries as "frontier" areas for innovation. The strategy includes investments in onshore, offshore, and floating wind, nuclear fusion, carbon capture utilisation and storage (CCUS), and hydrogen.

There's much that doesn't fit onto this page, so read on to see key speakers, panels, our attendee list and more.

We are deeply grateful for your support and engagement, which made this year's Clean Power 2030 Summits a resounding success. Together, we are shaping a sustainable future and driving the UK's clean energy transition forward. We look forward to continuing this journey with you in the years to come.

Warm regards,

Jo Wilkinson | Director, Event Content

What Our Attendees Thought

We surveyed our attendees and asked them how they would rate the Clean Power 2030 Summits for the following:

Q

Will you Attend Clean Power 2030 Summits in 2026?

85%

said Yes

Quality of Speakers

90%

said Very Good or Higher

Net Promoter Score

72

Did the Conference Facilitate any New Business for You?

68%

said Yes

Q

Did you Make the Contacts that you Wanted to Make at the Summit?

75%

said Yes

Networking & Quality of Meetings

93%

said Good or Higher

Format of the Conference

75%

said Good or Higher

Program Structure & Timings

76%

said Very Good or Higher

”

I came to the Summit to connect with others in the industry and get a clearer picture of what's happening across the sector. It's one thing to read about the challenges and progress from a distance, but being here gives you a much better feel for the conversations that are shaping things in real time.

NEWS

UK remains an 'attractive' space for clean energy investment

By JP Casey

July 1, 2025

Europe Supply, Networks

[LinkedIn](#) [Twitter](#) [Reddit](#) [Facebook](#) [Email](#)

The UK is an attractive space for renewable energy investors, but the investment is still very attractive, and we see interest from our existing pool of some other international investors, who are seeing the UK as a good place to invest.

These were some of the key conclusions drawn by speakers at the first day of the 2030 Summits event, hosted by Solar Media in London.

"The UK is still very attractive, and we see interest from our existing pool of some other international investors, who are seeing the UK as a good place to invest."

UK government Solar Roadmap targets 'once-in-a-generation' local supply chain

By Molly Green

July 1, 2025

Europe Policy, Manufacturing, Markets & Finance

[LinkedIn](#) [Twitter](#) [Reddit](#) [Facebook](#) [Email](#)

The UK government has released this week (30 June) its Solar Roadmap, which sets out practical measures to meet the country's solar PV targets.

Among the measures the government-industry paper aims to tackle is the "once-in-a-generation" opportunity to grow the solar supply chain and manufacturing capacity in the UK. This will help support the government's Clean Power 2030 mission and will be achieved where it "makes economic sense", according to the paper.

Clean Power Post

CLEAN POWER 2030

UK SOLAR ROADMAP CHARTS COURSE TO 47GW BY 2030

The UK government published its Solar Roadmap on 30 June, a government-industry paper setting out practical measures to meet solar capacity targets.

The roadmap was outlined a day before the start of the Clean Power 2030 Summits. It states that meeting the upper end of the capacity ambition set in the Clean Power 2030 (CP30) Action Plan of 47GW solar would require just 0.4% of total UK land. It would power the equivalent of nine million homes using solar energy.

It is the culmination of two years' work, with the Solar Taskforce launched per the recommendation of ex-Conservative member of parliament Chris Skidmore in his 2023 Review of Net Zero. It was reconvened by current energy secretary Ed Miliband shortly after the current government came to power.

Shanks: Building green supply chain and skills a priority

The Solar Roadmap sets 72 actions for accelerating the efficient rollout of solar across the UK, divided into six categories: Rooftop Solar, Electricity Networks, Supply Chain and Innovations, Skills, Planning and support schemes, and Working with others.

Michael Shanks MP, parliamentary under-secretary of state for energy, discussed the government's commitment to clean power by 2030, and some of the financial benefits that the energy transition will deliver, in a Ministerial Address on Day One of the event yesterday (1 July).

"Crucially, it's the economic opportunity of the 21st Century," Shanks said. "For far too long, people across this country have faced the volatility of fossil fuel prices ... for far too long we've been paying the price for our exposure to gas, and we need to do what we possibly can to remove that volatility, and this sprint to home-grown power is part of that."

He described the UK government's clean power commitment as "one of the top five priorities" for the Labour party, as he took questions on some of the challenges the UK still faces. "It's also about how we invest in supply chains, in skills and jobs in this country," Shanks said.

Fellow keynote speaker Phoebe O'Hara, clean power lead at the Energy Transitions Commission, said: "Coming back from London Climate Action Week, it became really clear to me that the UK's Clean Power 2030 plan is a really exciting time for us in the UK, and for those outside the UK. The world is watching ... and for my generation in particular, we've got a lot of excitement around that and we're really keen to be a part of that."
